# Connect Entra ID

ATLAS employee user management is fully handled through EntraID. Therefore, ATLAS does not need to perform any user management in parallel. All changes made in Entra ID—such as adding, removing, or deactivating users are automatically synchronized with ATLAS.

> **Essentials**

- Entra ID license (free tier minimum)
- Microsoft 365 license with Outlook support (business basic is lowest available price)

## How to connect

> **Entra ID**

All that needs to be done is to install two enterprise applications in the customer's Entra ID environment. This process is fully automated and can be completed with a single click.

| TKH To support Registration URL | → | Admin to click on URL. Admin to give consent to permissions. | → | If permissions approved, Enterprise apps will be created. | → | Ready to use ATLAS! |

Now the enterprise applications have been created, ATLAS is ready for use! Please go to the next step to set up the user groups to define who can make use of the system.
